**Availability Update for Sterile Water for Injection, USP and
Bacteriostatic Water for Injection, USP (Multiple Presentations)**

Dear Customer,

Pfizer Hospital is committed to providing timely supply information so that you can plan for patient care. As such, we want to notify you that we are anticipating an ongoing limited supply and intermittent stockout situation for **Sterile Water for Injection, USP** and **Bacteriostatic Water for Injection, USP** presentations through the remainder of 2021 and into 2022.

These products have been in limited supply for several months as a result of significant and sustained increases in demand arising from competitor shortages and COVID-19 related impacts. While Pfizer has worked to meet this increased demand, which is well above our historical volumes, the market need continues to outpace Pfizer's production capacity.

The impacted presentations are detailed in the table below. All products in which the supply status is noted as "Depleted" will not be available until the next delivery date. Those products with supply status noted as "Limited Supply" will be released in limited quantities on a weekly basis to wholesaler, Distributors and Direct through our Prime ordering system in order to ensure equitable distribution of inventory and reduce the potential for stockouts. Please note that product status and next delivery dates may change. We encourage you to check our Pfizer Hospital [Availability Report](#), updated daily and accessible on the [PfizerHospitalUS.com](#) homepage, for the latest information.

NDC	Product Description	Product Status as of 11/22	Next Delivery	Estimated Recovery
-----	---------------------	-------------------------------	------------------	-----------------------

00409-3977-03	Bacteriostatic Water for Injection, USP 30 mL	Depleted	Jan-22	Q3 2022
